Neuro-Vault PREVIEW

Your whole day, your family and your life admin in one calm place.

Why I built this

I built this app because of so many things I struggle with, like what to do next, and once again my memory isn't reliable. I need structure, and this was a way to have everything for day to day life struggles all in one app. I can open the app and see my day, so there are no surprises. My wife can put stuff on there that she wants me to do without surprising me and causing me to panic.

It has helped us so much. Honestly, I didn't even really know that I needed it this bad until I started building it. I've kind of relied on masking to be normal and thinking I don't need something like this, but I've seen people that do. I was just going to build it, and I realized very early on that I actually needed this more than I knew. There's so much to remember to do as an adult with daily things, and this app makes sure I can do it all effectively and without anxiety.

My wife can see my whole day and even help me plan it the day before or a week before. It syncs with your iPhone or Google Calendar too, so you can add things way in the future and see it in the app when the time comes. It solves so many problems for me and my family that honestly we didn't even know caused that many problems. Realizing how much I needed this app made me work that much harder on making sure it works well, and since using it, my anxiety has gone way down.

- Calin

What this app does

Neuro-Vault is one app for the things that run your day. It holds your schedule, your meds, your notes and journal, your groceries and meals, and your car care. Everything sits behind one menu, so you are not hunting through five different apps.

You can also share part of it. Your partner gets his/her own view. He/she can see your time blocks, ask for time, add things to your Brain Dump, and use the grocery list. Your partner never sees your Journal or your meds.

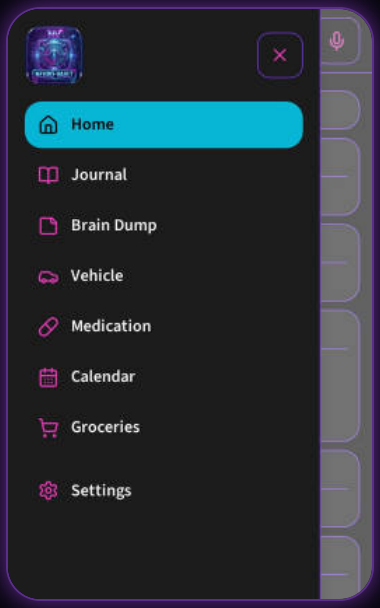

Finding your way around

At the top left is the **menu** button. Tap it and a drawer slides out from the side. The tabs are **Home**, **Journal**, **Brain Dump**, **Vehicle**, **Medication**, **Calendar**, **Groceries**, and **Settings**. If you turn on Neuro-Budget or Neuro-Trip, their quick links show up here too.

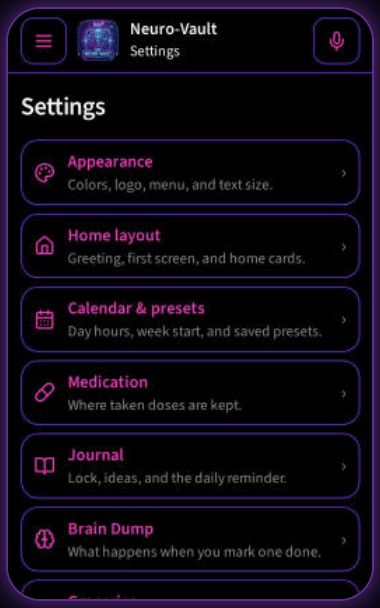

At the top right is the **mic** button. Tap it to say or type something and send it where it belongs. More on that in the Voice section.

Most tabs work the same way:

- **+ Add entry** opens a form. Tap **Save** when you are done, or **Cancel** to back out.
- Times follow your phone's 12-hour or 24-hour setting.

The menu drawer. Everything is one tap away.

Settings. Each row opens one small screen.

Getting started

This is the order I recommend. Do it once and the rest is a few taps a day.

1 Put it on your Home Screen

- **iPhone:** open Neuro-Vault in Safari. Tap **Share**, then **Add to Home Screen**.
- **Android:** open Neuro-Vault in Chrome. Open the browser menu and tap **Install app** or **Add to Home screen**.

2 Make it yours in Settings

- Open **Settings**, then **Appearance**. Pick **Match device**, **Light**, or **Dark**. Pick a theme color and a text size.
- Open **Home layout**. Type your name under **Name in the greeting**. Choose which tab the app opens to.

3 Set up your day

- Open **Calendar**. Tap **+ Add entry**, then **Time block**. Add the parts of your day, like Work or Dinner.
- In **Settings**, then **Calendar & presets**, set **Day starts** and **Day ends** to your real hours.

4 Add your meds

- Open **Medication**. Tap **+ Add entry**, then **Prescription**. Add the name, dose, times, and a reminder.
- For something like Tylenol, tap **Over the counter** instead.

5 Add your other calendars and your partner

- Open **Settings**, then **Other calendars**. Paste your family calendar link and tap **Add calendar**.
- Open **Settings**, then **Partner link**. Type your partner's name, pick his/her color, and tap **Create partner link**. Tap **Copy link** and send it to him/her.

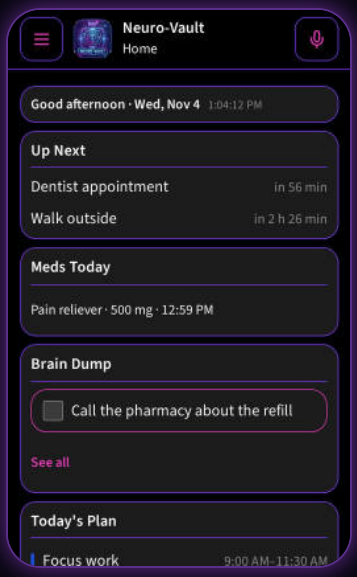

6 Start your lists

- Open **Groceries** and add items as you think of them. Open **Vehicle** and add your car. Use **Brain Dump** any time something pops into your head.

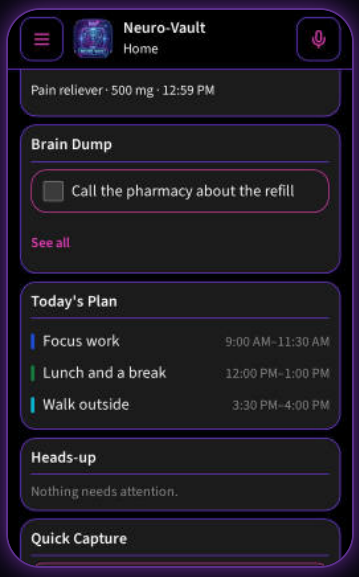

Home screen

Home is where I start every morning. It is a stack of cards. In **Settings**, then **Home layout**, drag a row to reorder a card, tap its name to rename it, or tap the eye to hide it.

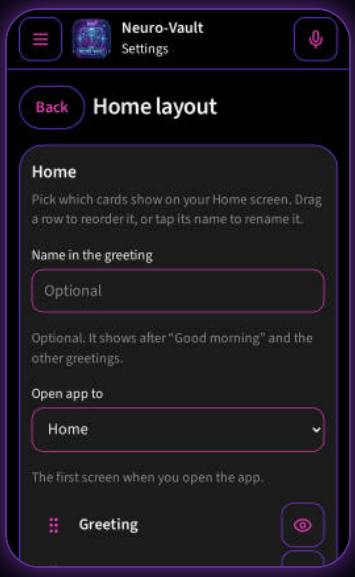

- **Greeting:** says good morning with your name, plus the date and time.
- **Up Next:** what is coming next today, so you are not surprised.
- **Meds Today:** today's doses. Tap **Take** when you take one. It shows as **Taken**.
- **Brain Dump:** the notes you marked **Add to Home page**. Tap **See all** to open the full list.
- **Today's Plan:** your time blocks for today. Each one has a colored stripe so you can read your day at a glance.
- **Heads-up:** things that need your attention.
- **Quick Capture:** type or talk, then tap **Save**. It goes straight into Brain Dump.
- **Neuro-Budget** and **Neuro-Trip** show up if you linked them. Budget shows the bills due this week and your **Safe to spend**. Trip shows **Get ready**, **Leave by**, and **Be there by**.

Home, with a few sample entries.

Scroll down for today's plan and Quick Capture.

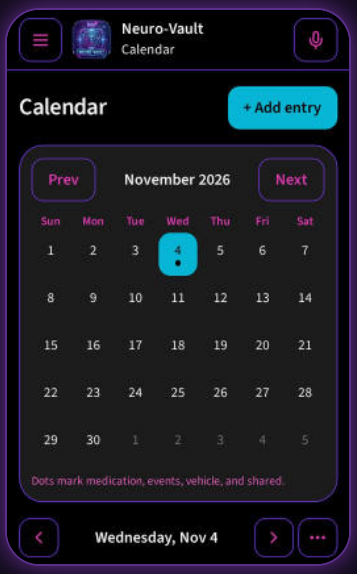

Home layout. Reorder or hide cards.

Calendar and time blocks

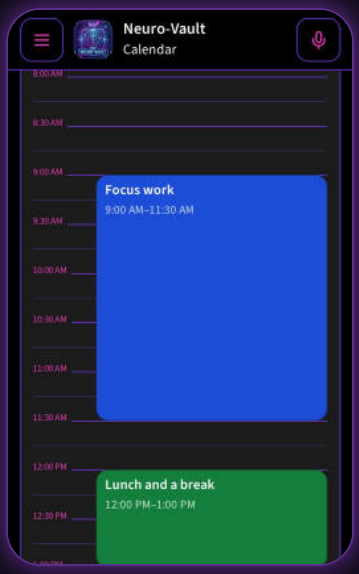

The **Calendar** tab has a month calendar on top and your day below it. Dots on a date mean something is there: medication, events, vehicle, or another calendar.

- Tap a date to open that day. Use the arrows to move a day at a time. **Today** jumps back.

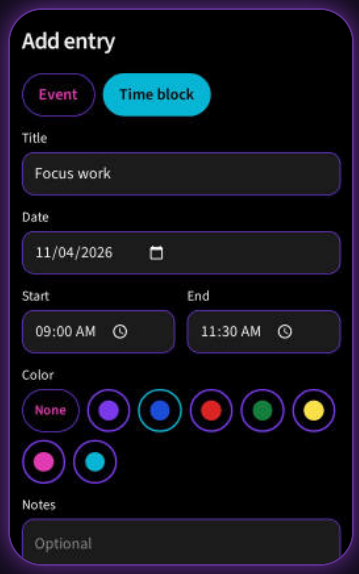

- The day is laid out as a planner, from your **Day starts** hour to your **Day ends** hour. A white line shows the current time.

The calendar, with today picked.

Time blocks sit on your day like a timeline.

Adding a time block, with a color.

Add an event or a time block

Tap **+ Add entry**. Pick **Event** or **Time block**, then add a title, date, start, end, and notes.

- **Event:** something with a time, like an appointment. You can set a reminder and an early heads-up.
- **Time block:** a part of your day, like Work. Pick a color so you can see it fast.

If a time block lands on top of another one, the app tells you the time is taken and shows the next open slot.

Work with a block

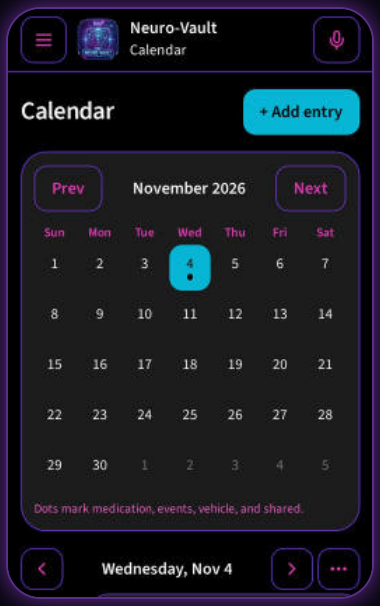

- Tap a block to open it. Use the pencil to edit it, or the copy icon to copy it to another day.
- Tap the three dots for **Move**, **Save as preset**, and **Delete**.

- **Move** shows arrows that nudge the block five minutes earlier or later. Tap **Done** when it is right. You can also press and hold a block and drag it.

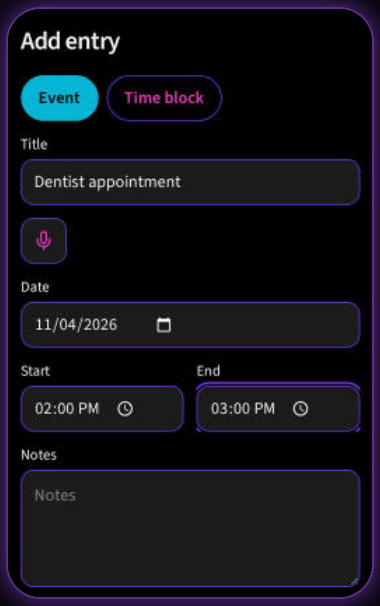

Day actions

Tap **Day actions** next to the date for:

- **Plan tomorrow** jumps to tomorrow so you can plan ahead.
- **Copy this day** and **Save this day as preset** reuse the whole day.
- **Clear time blocks for this day** asks you to confirm, then clears the day.
- **Read the plan aloud** reads your day out loud.

Day actions: plan tomorrow, copy, or save a preset.

Adding an event, with a reminder.

Presets

A preset is a block or a whole day that you can place again in one tap. I use them for my usual work day and my day off.

Save one

- Open a block, tap the three dots, then **Save as preset**. Or use **Save this day as preset** under Day actions.

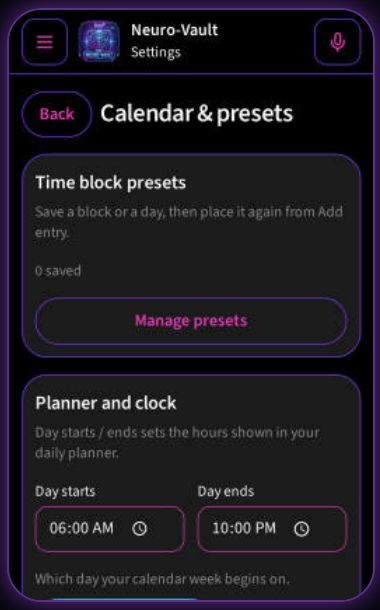

- Type a **Preset name**.
- Pick **Fixed time** to keep the same clock times, or **Duration only** to keep just the length.
- If the name already exists, choose **Save as new** or **Replace existing**.

Use one

- Tap **+ Add entry**, then **Use a preset**. Pick the preset.
- For a whole day, choose to **Add to existing blocks** or **Replace that day's blocks**.

Manage them

Open **Settings**, then **Calendar & presets**, then **Manage presets**. Tap a preset to edit or **Delete** it, or tap **+ New preset**.

Presets and planner hours in Settings.

Other calendars

You can show a shared iPhone or Google calendar right inside Neuro-Vault. This is how your partner's plans and your family events show up without you typing them in.

1. Open **Settings**, then **Other calendars**.
2. Type a **Name**, like Family, and paste the read-only iCal link. It starts with https:// or webcal://.

3. Tap **Add calendar**, then **Refresh now**.

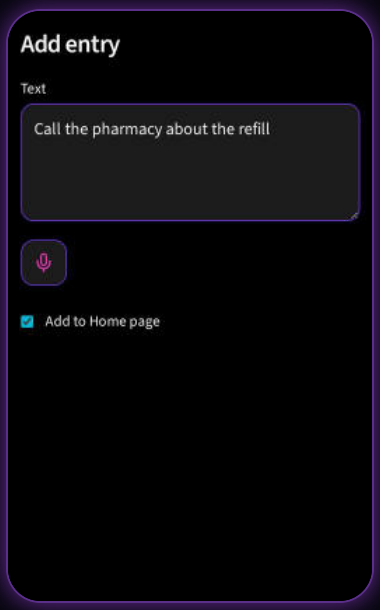

Those events show as busy time on your day. The app counts them when it checks for overlaps. It is one way only: nothing you add here goes back to that calendar.

Brain Dump

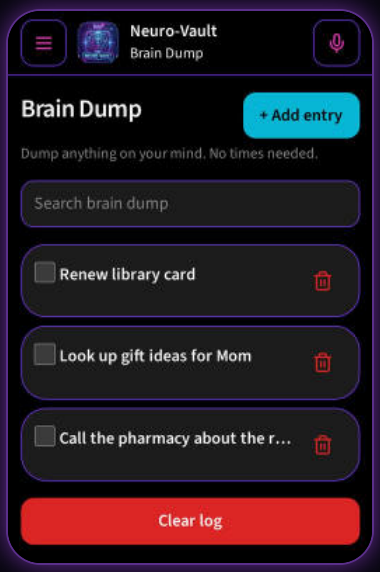

Brain Dump is where I put anything on my mind, so I can stop holding it. No times needed. These are your notes.

- Tap **+ Add entry**. Type what is on your mind, or tap the mic to talk.
- Turn on **Add to Home page** to show it on your Home screen.
- Tap an entry, then the three dots for **Pin**, **Turn into time block**, or **Delete**.
- Your partner can add things here too.

Done items stay in Brain Dump until you delete them. If you turn the Brain Dump log off, marking one done removes it. Open **Settings**, then **Manage logs**, to choose how long done items are kept: **7 days**, **30 days**, or **90 days**.

Brain Dump: type it and move on.

Your Brain Dump list.

Journal

The Journal is private. Your partner never sees it. Entries stay on your device unless you turn on **Sync journal**.

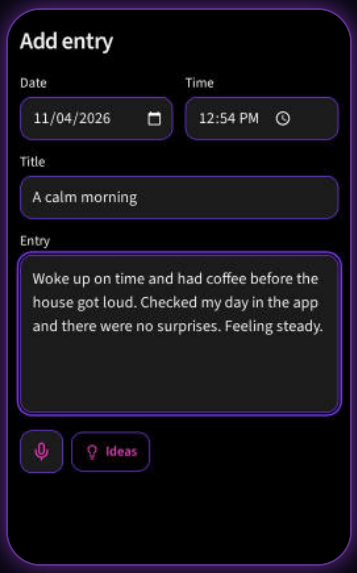

- Tap **+ Add entry**. Pick the date and time, add a title, and write.
- Stuck? Tap **Ideas** for a prompt, like "What felt loud today?" You can add your own in Settings.

Lock it

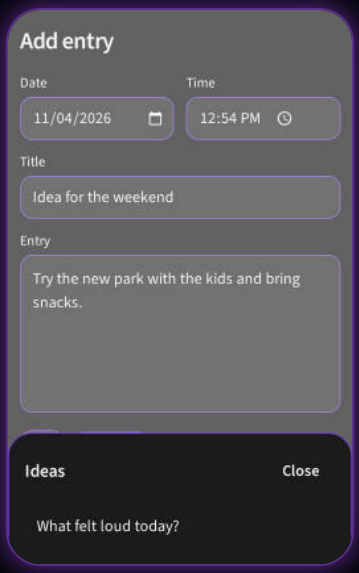

Open **Settings**, then **Journal**, and turn on **Lock Journal**.

- Choose a PIN of up to six digits, confirm it, and tap **Turn on lock**.
- Set **Re-lock after leaving the app** to **Immediately**, **1 min**, or **5 min**.
- Tap **Add Face ID or fingerprint** if your phone supports it. Then you can unlock without typing.
- If you forget the PIN, **Erase journal and reset lock** clears every entry. They cannot be recovered, so keep your PIN safe.

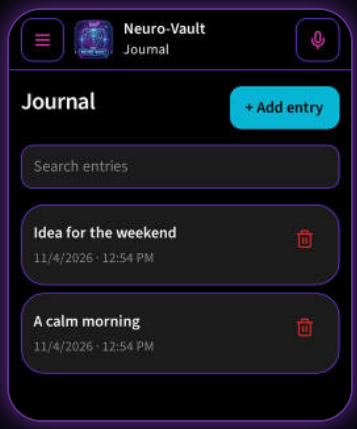

For a nudge to write, turn on **Daily journal reminder** and pick a time.

A new Journal entry.

Stuck? Tap Ideas for a prompt.

Your Journal entries.

Medication

Medication is private too. It does not show in your partner's view.

Prescription

Tap **+ Add entry**, then **Prescription**.

- **Name** and **Dose**.

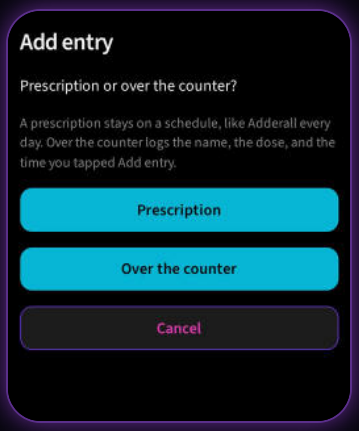

- **Times:** tap **Add time** for each dose in a day.
- **Days:** tap the days it applies to. Leave them empty for every day.
- **Reminder: None**, **Gentle, once**, or **Persistent until done**.
- **Early heads-up:** a nudge before the dose, like 15 minutes before.
- **Repeat every:** how often a persistent reminder repeats, from 5 to 60 minutes.
- **Show on calendar** puts the dose on your Calendar.

Over the counter

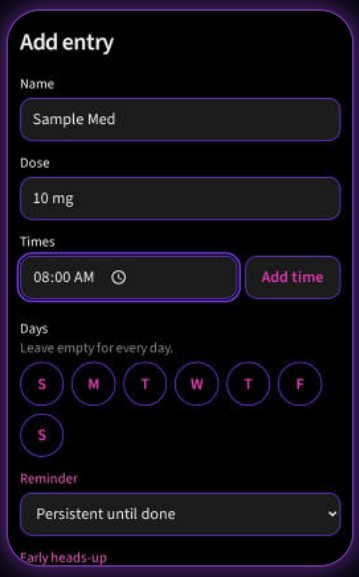

Tap **+ Add entry**, then **Over the counter**. Type the name and the dosage. The date and time are set to when you tapped it, so you can see when you last took it.

Taking your dose

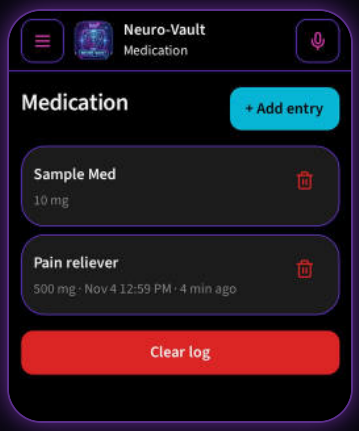

- Doses show on Home under **Meds Today**. Tap **Take**. On a reminder, tap **Snooze** or **Dismiss**.

Prescription or over the counter?

A prescription: dose, times, and a reminder.

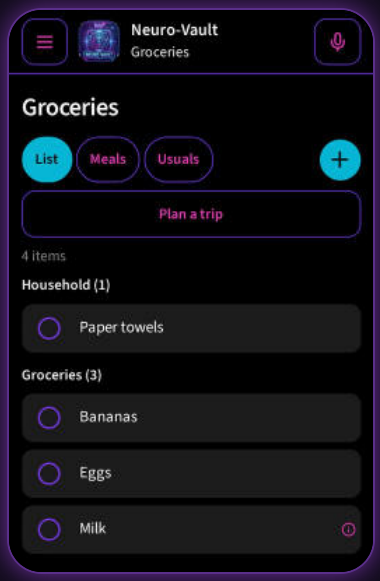

The Medication tab with two sample entries.

Groceries and meals

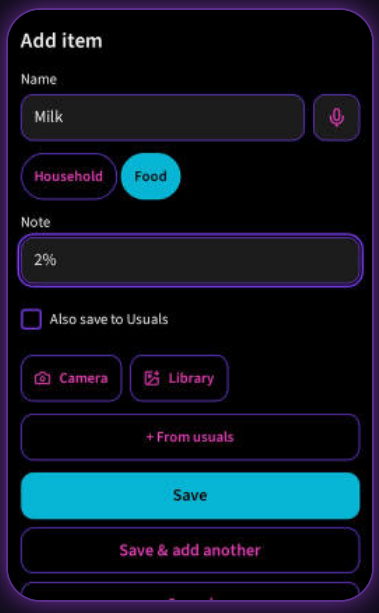

Groceries has three parts: **List**, **Meals**, and **Usuals**. Switch between them at the top.

List

- Tap the round **+** to add an item. Type the **Name**.
- Pick **Household** or **Food**. The list shows Household first, then Groceries, each with a count.
- Add a note, like a brand. Tap **Camera** or **Library** to add a photo. Tap **Save**, or **Save & add another**.
- Tap **+ From usuals** to pull in your regulars. Turn on **Also save to Usuals** to keep the item for next time.
- Tap the circle to check something off. Then tap **Mark 1 complete** to clear it from the list. The number matches how many you checked. Made a mistake? Tap **Undo**.
- Tap an item to see its details. Photos show small. Tap one to see it full size.

The grocery list, Household first.

Adding an item.

Recently bought

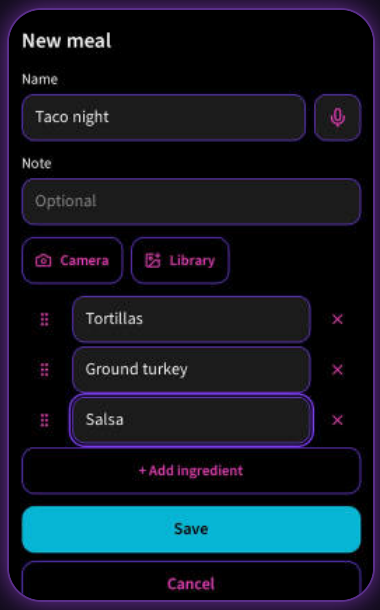

Items you mark complete go into **Recently bought**, so you can see what you got last time. Tap **Clear** to empty it. You can turn it off in **Settings**, then **Manage logs**.

Plan a trip

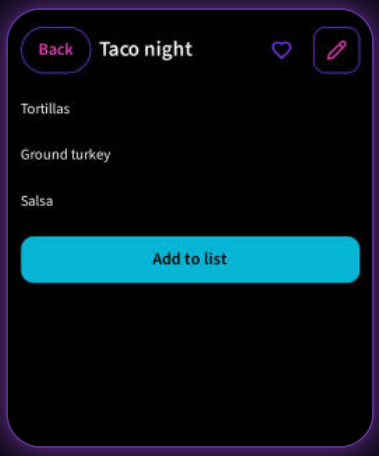

- Tap **Plan a trip**. Tap the items you need now.
- Tap **Household run** to pick every Household item at once. You can untap any of them.
- Tap **Start trip**. Those items leave the big list and move into the trip.
- A **Trip in progress** button shows at the top. Tap it to open the trip. Check items off as you shop.
- Tap **End trip**. Checked items go to Recently bought. Anything you did not get goes back on the big list.

Meals

- Tap **New meal**. Add a name, a note, a photo, and ingredients. Tap **+ Add ingredient** for each one.
- Open a meal to add its ingredients to your list. Mark favorites to find them fast.
- Can't decide? Tap **Pick for us**, or **Pick again**.

A new meal with ingredients.

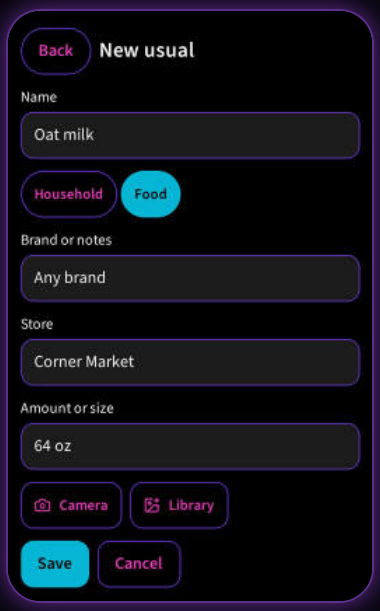

Open a meal to add it to your list.

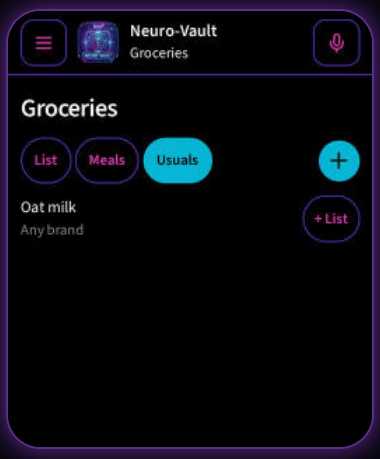

Usuals

- Usuals are the things you buy all the time. Tap **New usual**.
- Add the **Name**, **Household** or **Food**, **Brand or notes**, **Store**, **Amount or size**, and a photo.
- Open a usual and tap **Add to list** to put it on your list.
- You can also manage usuals in **Settings**, then **Groceries**.

Your partner uses the same grocery list, so you both see the same thing.

A new usual.

Usuals you buy all the time.

Vehicle

Vehicle keeps your car care in one place, so you are not guessing when the oil was changed.

Add your car

Tap **Add vehicle**. Type a **Name/nickname**, or the **Year**, **Make**, and **Model**. Add your **Current mileage** if you want to. You can add more than one vehicle.

Log a service

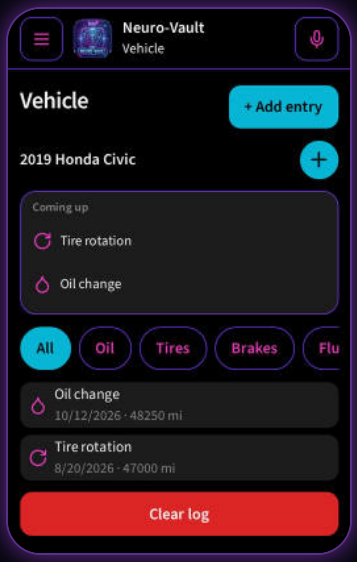

Tap **+ Add entry**. Pick a **Service type** from the list:

Oil change, **Tire rotation**, **Tire pressure check**, **New tires**, **Brakes**, **Battery**, **Wiper blades**, **Air filter**, **Cabin air filter**, **Coolant/fluids**, **Transmission fluid**, **Spark plugs**, **Inspection/registration**, **Car wash**, **Repair**, and **Other**.

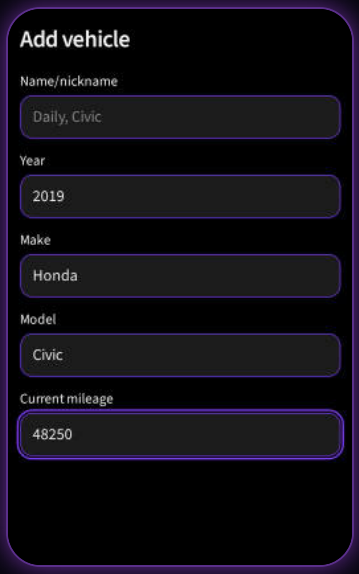

- Every service has a **Date**, **Mileage**, **Cost**, **Shop/Where**, **Notes**, and **Receipt photo**.
- Some types add their own fields. An oil change asks for oil type and weight. Tire pressure asks for front and rear PSI. Brakes asks which end and whether pads or rotors were done. Repair asks what was fixed.

Due dates and reminders

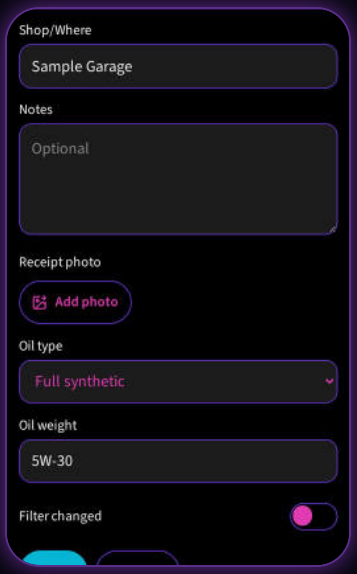

- Set when the next one is due by **Miles** or by **Months**.
- Upcoming services show under **Coming up**, with a **Due soon** or **Overdue** tag when it matters.

Vehicle, with services coming up.

Adding your car.

Logging an oil change.

Partner link

This is the part that changed things for us. Your partner gets his/her own view of your day. He/she does not need an account or the app on his/her phone. He/she just opens the link.

Set it up

1. Open **Settings**, then **Partner link**.
2. Type your partner's **Partner name**. Pick his/her **Partner color**.

3. Tap **Create partner link**.
4. Tap **Copy link** and send it to him/her. He/she can add it to his/her Home Screen too.

Make a new link turns off the old one. **Turn off partner link** ends his/her access. The link works across all of your devices.

What your partner sees

The partner screen has five tabs along the bottom: **Home**, **Calendar**, **Groceries**, **Requests**, and **Settings**. It uses its own theme, pink to start.

- Your partner sees your time blocks and **Open time today**. He/she never sees your Journal or your meds.
- Your partner uses the same grocery list you do.

Requests

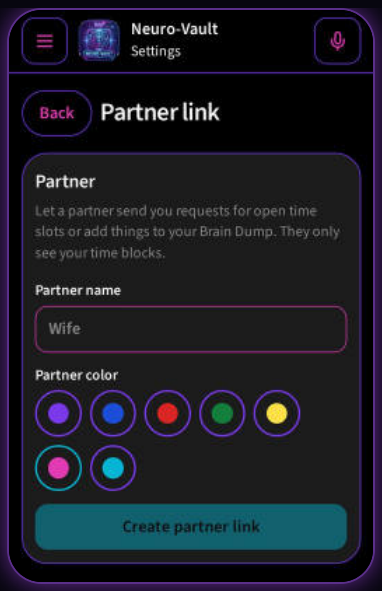

- Your partner taps the round add button and picks **Request a time block**, adds a title, date, start, and end, then taps **Send Request**.
- Open **Requests** in your menu. It shows under **Pending**.
- Tap **Accept** and it becomes a time block, in his/her color, with his/her name on it. You can accept it at a different time if the first one does not work.
- Tap **Deny**. You have to type a reason, then tap **Send denial**. He/she sees the reason and the status, **Accepted** or **Denied**.

Brain Dump from your partner

Your partner taps the add button, then **Add to Brain Dump**. He/she can check **Add to Home page** so you see it on your Home screen.

His/her settings

Your partner can choose his/her own theme color, reorder or hide his/her Home cards, and pick how long history stays (7, 30, or 90 days). **Clear history** only clears it from his/her view.

Partner link setup.

Sync across devices

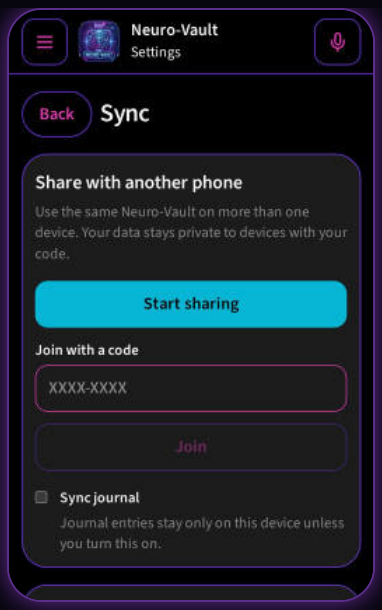

You can use the same Neuro-Vault on your phone and your iPad. Sync shares your data only. Your theme and layout settings stay on each device.

1. On your first device, open **Settings**, then **Sync**. Tap **Start sharing**. You get a code.
2. On your second device, open **Settings**, then **Sync**. Type the code under **Join with a code** and tap **Join**. If that device already has data, the app asks if you want to replace it or merge both. Merge keeps both, and the newest edit wins.

- **Make a new code** disconnects devices still using the old one. **Stop sharing on this device** leaves the group.
- **Sync journal** is off unless you turn it on. Until then, your Journal stays on the device you wrote it on.

Back up your data

Under **Data** in the same screen, tap **Export JSON** to save a backup file, or **Import JSON** to bring one back. Your Grok key stays out of the file unless you check **Include API key in the export**.

Sync and backup.

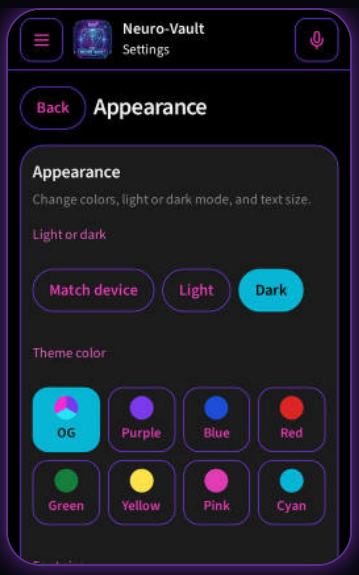

Appearance

Open **Settings**, then **Appearance**.

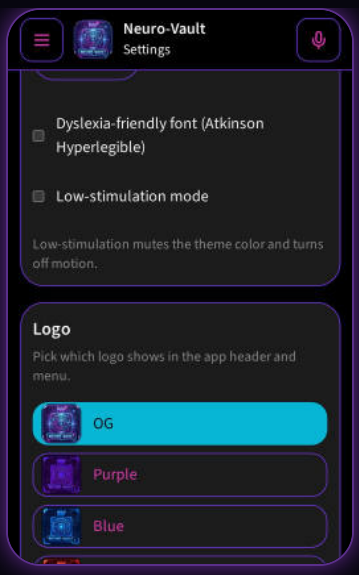

- **Light or dark: Match device**, **Light**, or **Dark**.
- **Theme color: OG** is the original look. Or pick **Purple**, **Blue**, **Red**, **Green**, **Yellow**, **Pink**, or **Cyan**.
- **Font size: Small**, **Medium**, **Large**, or **Extra large**.
- **Dyslexia-friendly font** switches to Atkinson Hyperlegible. **Low-stimulation mode** mutes the theme color and turns off motion.
- **Logo:** pick the logo you see in the header and menu. Choose **OG**, a color, or **Match my theme**.

Your menu

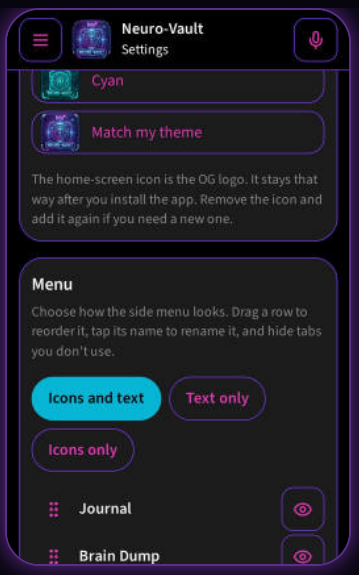

Choose **Icons and text**, **Text only**, or **Icons only**. Drag a row to reorder it, tap its name to rename it, or hide a tab.

Appearance: light or dark, theme color, text size.

Dyslexia-friendly font and logo choices.

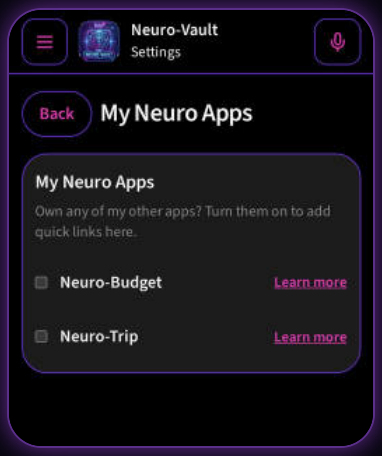

Your menu: reorder, rename, or hide tabs.

My Neuro Apps

If you own my other apps, Neuro-Vault can show a little of them on your Home screen. This is optional. Open **Settings**, then **My Neuro Apps**.

1. Turn on **Neuro-Budget** or **Neuro-Trip**.
2. In the other app, copy its summary code. In Neuro-Budget it is under Settings, then Summary for another app. In Neuro-Trip it is under Link to Neuro-Vault.
3. Paste it into the box in Neuro-Vault and tap **Save**. The box then says **Summary code entered**. Tap the pencil to change it, or **Remove** to unlink.
4. Tap **Test connection**. A status line tells you if it worked.

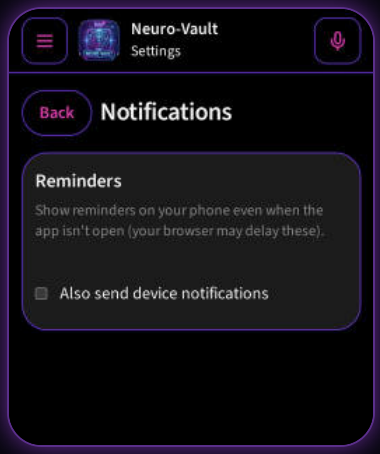

My Neuro Apps.

Notifications

Reminders cover events, meds, your Journal, and due vehicle services.

- Open **Settings**, then **Notifications**. Turn on **Also send device notifications** and allow it when your phone asks.
- On an iPhone, add Neuro-Vault to your Home Screen first.

Each reminder can be **Gentle, once** or **Persistent until done**. Tap **Snooze** to push it back, or **Dismiss** to clear it.

Notifications.

Voice

Tap the **mic** at the top right to talk instead of typing.

- Choose where it goes: **Brain Dump**, **Journal**, **Home page**, or **Event**.
- Speak, check the words, and tap **Save**. Your phone has to allow the microphone.

Saving needs nothing extra. To ask questions about your records, paste your own xAI API key in **Settings**, then **About**.

Notes / Important

- Your data stays on your device unless you turn on sync or a partner link. There is no account.
- If anything isn't working, email help@neuroglitchprojects.com and I'll fix it. You can also find me at neuroglitchprojects.com.
