Neuro-Trip PREVIEW

Neuro-Trip works backward from the time you must arrive and tells you when to leave.

Why I built this

Time blindness makes me late, even to work. I'd work backwards from the start time (the drive, the stops, getting there early), then forget the answer and redo the math until I just guessed. Now I do it once and look at my phone. The checklist was my wife's idea, because when I rush, I forget things.

- Calin

What this app does

You type where you have to be and the time you have to be there. Neuro-Trip subtracts the drive, any stops, and any extra time you add. It shows the time to leave. It never asks what time you are leaving.

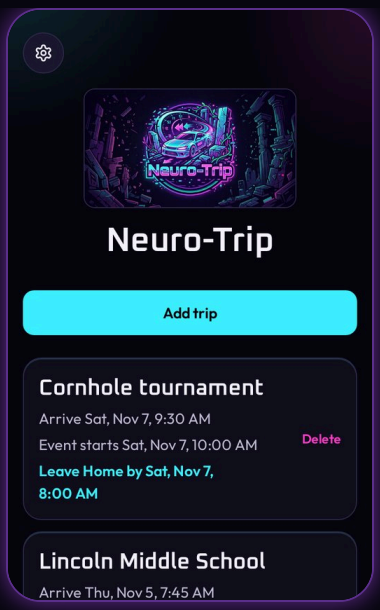

You can keep more than one trip.

The drive time is a number you type. There is no map and no location tracking.

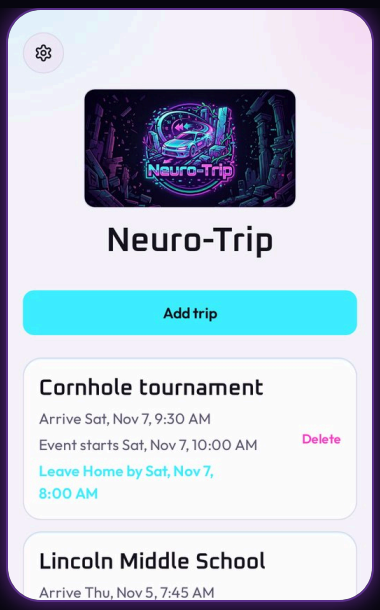

There is no account and no sign-in.

Trips are saved on the phone. Sync is optional and only shares trips with someone who has the same code.

A blank trip is not added to the home screen. You have to enter something and save it, or tap Submit.

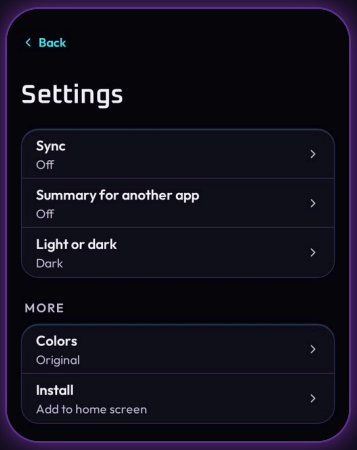

Home, with two saved trips.

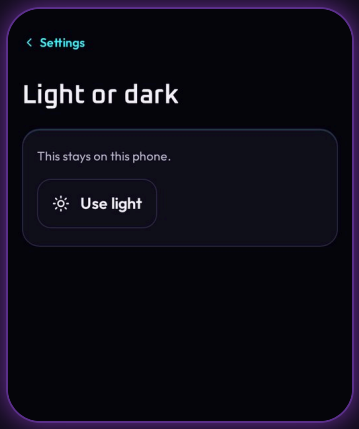

The same home screen in light mode.

Settings and appearance

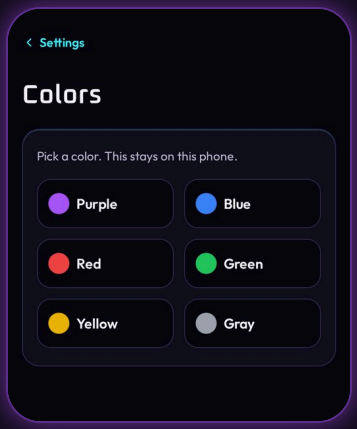

Tap the gear at the top of the screen. That opens Settings. The same gear is on a trip screen. Tap Back to close Settings.

Settings. Each row opens one small screen.

Light or dark.

Pick a theme color.

Install

The Install button adds Neuro-Trip to the phone's home screen.

1. Open Settings.
2. Tap Install.
3. On an iPhone, the app opens the steps to add it to the Home Screen.

4. On other phones, the browser install prompt opens when the browser allows it. If it does not, use the browser menu and choose Install app or Add to Home Screen.

If Neuro-Trip is already on the home screen, Settings says “Installed on this phone.”

Day or night

Under Light or dark, tap Use light or Use dark. The choice stays on this phone.

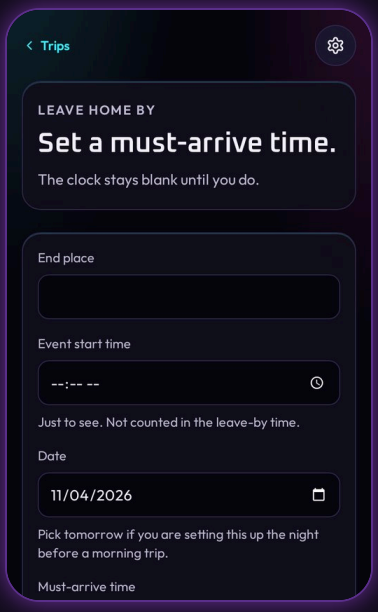

Theme colors

Under the day and night control, tap a color. The choices are Purple, Blue, Red, Green, Yellow, and Gray. The word On shows on the color you picked. That color replaces the original accent on buttons, plus signs, and late times. Tap the same color again to go back to the original color. The choice stays on this phone.

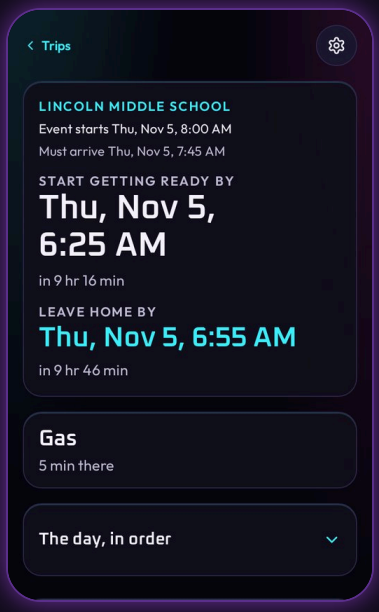

How it works

Home screen

The logo and the name Neuro-Trip are at the top.

A new trip. The clock waits for a must-arrive time.

The leave-by time updates as you type.

Add trip starts a new trip.

Saved trips are listed under that button. Open one by tapping it.

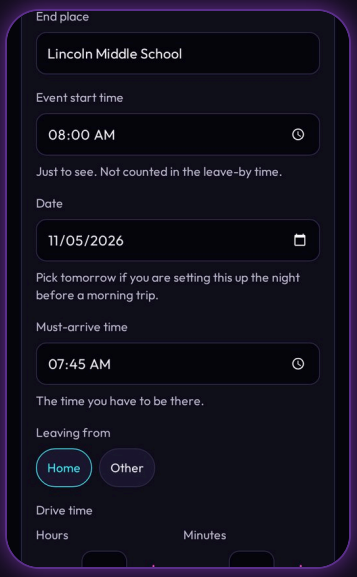

Delete asks “Are you sure?” Then tap Delete trip, or Cancel.

The trip form

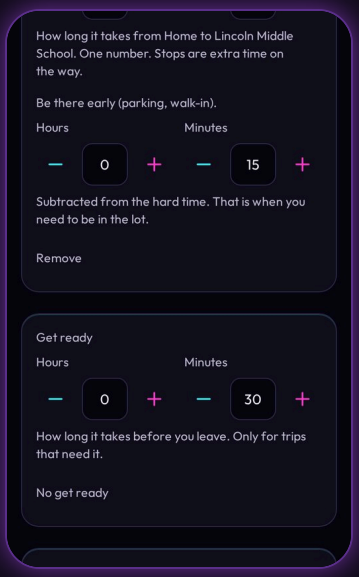

The leave-by time updates as you type. There is no separate calculate button. Until you set a must-arrive time, the clock says “Set a must-arrive time.”

Fields, from top to bottom:

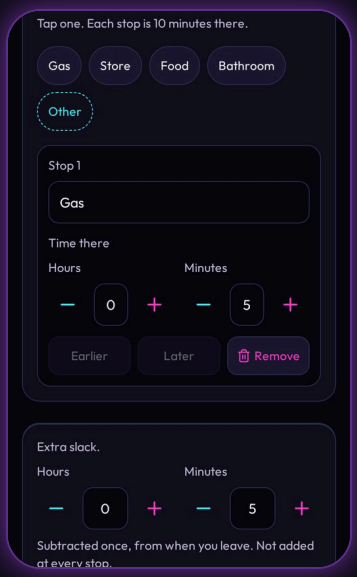

1. End place. The name of where you have to be.
2. Event start time. This is only to see. It is not counted in the leave-by time.
3. Date. Today is filled in. Pick tomorrow if you are setting this up the night before a morning trip.
4. Must-arrive time. The time you have to be there.
5. Leaving from. Home is the preset. Tap Other to type a different start place.
6. Drive time. Hours and minutes. This is one number for the whole drive from the start place to the end. Stops do not split it. Use minus and plus, or type the number. The number is centered in the hour and minute boxes.
7. Be there early (parking, walk-in). This starts at 0 minutes. Set it if you want time to park or walk in. It is subtracted from the must-arrive time. That result is when you need to be in the lot. Tap Remove to take it off. Tap Add be there early to put it back.
8. Get ready. Optional. Tap Add get ready. It starts at 15 minutes. That is how long it takes before you leave. Tap No get ready to remove it.
9. Stops. Optional. Tap Gas, Store, Food, or Bathroom. Each one starts at 10 minutes there. Tap Other to type a different stop name. Each stop has a name and Time there, in hours and minutes. Earlier and Later change the order. Remove deletes that stop. You can have no stops. You can set the time there to 0.
10. Extra slack. Optional. It is not on by default. Tap Add extra slack. It starts at 10 minutes and is subtracted once from the leave time, not once at every stop. Tap Remove to take it off.
11. Checklist. Optional. Tap Add checklist. Type an item and tap Add. Remove deletes one item. Remove checklist takes the whole list off.

Drive time and Be there early.

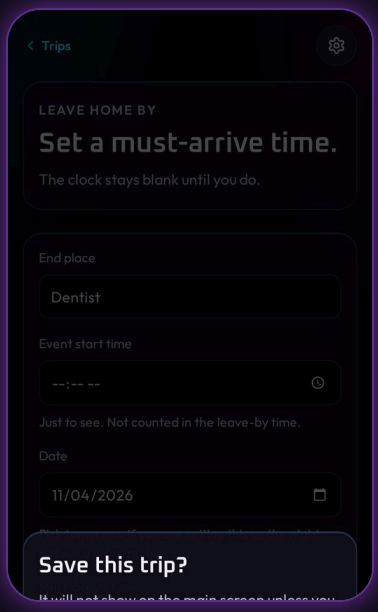

Get ready and a gas stop.

Extra slack and the checklist.

Submit stays off until a must-arrive time is set. Submit saves the trip and opens the reading view. Clear resets the form.

Tap Trips to go back. If you typed nothing, the trip is not added. If you typed something and have not submitted, the app asks “Save this trip?” Save trip adds it. Don’t save throws it away.

Leaving without saving? It asks first.

The clock

Neuro-Trip starts at the end and subtracts.

Lot time = must-arrive time minus Be there early.

Leave time = lot time minus the drive, minus the time at every stop, minus extra slack.

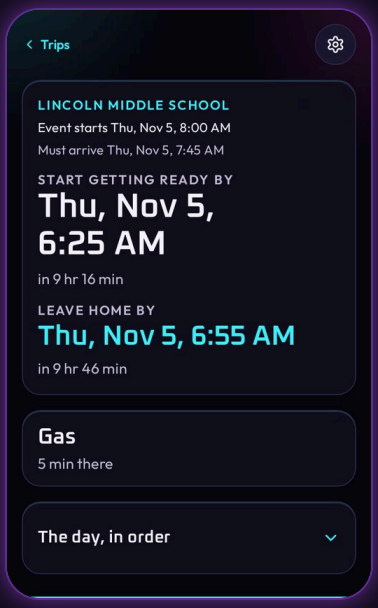

If there are no stops, leave time = lot time minus the drive minus extra slack.

If Get ready is on, start getting ready = leave time minus the get-ready time.

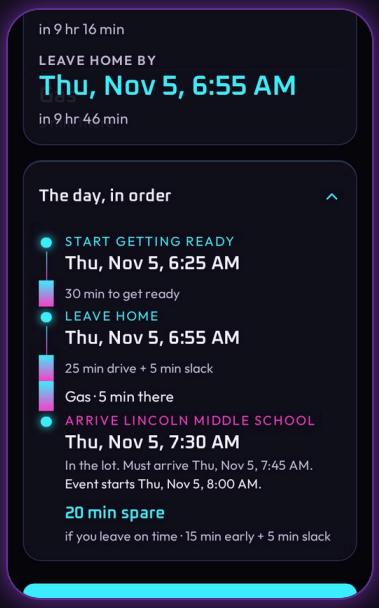

Spare minutes = Be there early plus extra slack. That is the spare if you leave on time.

The large line is “Leave [place] by” and the time. If that time has already passed, the plan stays on screen and says “Already late” with how long. If the plan crosses midnight, the date is shown on the times.

The day, in order is closed at first. Tap it to open the day from start to end: get ready if you added it, leave, the drive, each stop, arrival in the lot, the must-arrive time, the event start if you set one, and the spare minutes. Tap it again to close it.

After Submit: when to get ready and when to leave.

The day, in order.

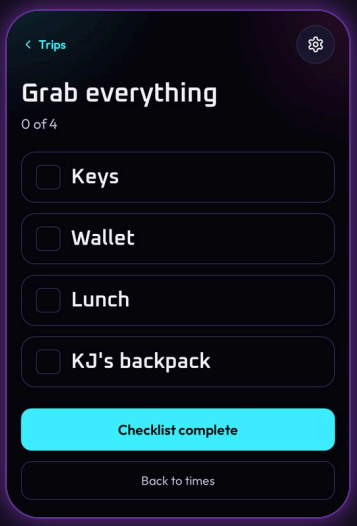

After you submit

The reading view shows the leave-by time and the day list. The form is hidden.

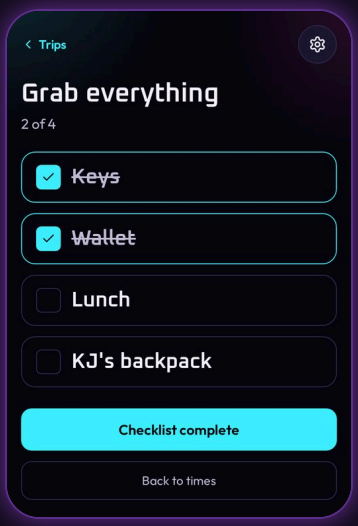

If the checklist has items, tap Start checklist. The screen says Grab everything. Tap each item when you have it. Tap Checklist complete, or Back to times, to return to the times.

Complete removes the trip and returns to the home screen.

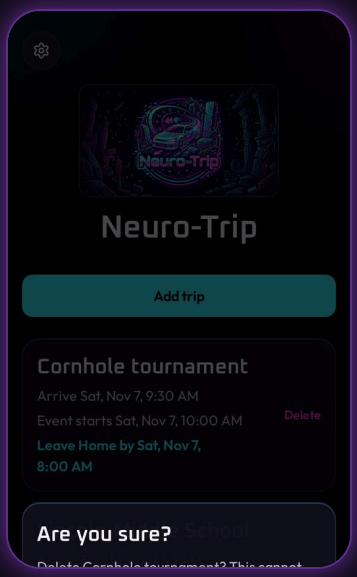

Edit opens the form again.

Grab everything before you go.

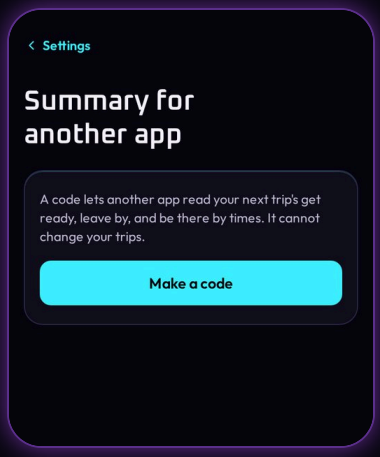

Tap each item as you grab it.

Delete always asks first.

Summary for another app

In Settings, Summary for another app makes a code. Another app can use it to read your next trips: get ready, leave by, and be there by times. It cannot change your trips.

Summary for another app.

Family share

Sync is in Settings. Tap the gear at the top of the home screen, then tap Sync.

1. Open Settings and tap Sync.

2. Tap Start sync. A 6-character code appears.
3. Tap Share code. The phone share sheet opens with the code and a link. If the phone cannot share, the code and link are copied.
4. On the other phone, open Neuro-Trip, open Settings, tap Sync, type the code, and tap Join.

Both phones then use the same trips. A change on one phone shows up on the other. A delete on one phone is deleted on the other. Opening the shared link on the other phone also starts the join.

Tap Stop sync on this phone to stop this phone from syncing. That does not erase the trips already on the phone. The other phone can keep using the code.

If the code is wrong, the app says it was not found. If the sync server cannot be reached, the app says sync is paused and the trips are still on this phone.

There is no account. Anyone who has the code can join those trips. Do not post the code in public.

Getting started

1. Open Neuro-Trip.
2. Tap Add trip.
3. Type the end place, confirm the date, and set the must-arrive time.
4. Leave the start as Home, or tap Other and type it.
5. Set the drive time in hours and minutes.
6. Set Be there early if you want time to park or walk in. It starts at 0.
7. Add a stop only if you will stop on the way.
8. Tap Submit.
9. Read the Leave by time.
10. Optional: open Settings and tap Install to put Neuro-Trip on the home screen.

Notes / Important

Trips, the sync code, and the color choice are stored on the phone.

There is no sign-in and no PIN.

Neuro-Trip is a one-time purchase. There is no monthly fee.

The app does not use maps or your location. You type the drive time.
