Neuro-Budget PREVIEW

Assign each bill to the paycheck that pays it, then see what is left to spend.

Why I built this

The first time I had to handle money and bills on my own, I panicked and I was struggling. So I built a spreadsheet that let me see my whole month before I got paid. That spreadsheet got me through, and it became Neuro-Budget. It does the math for you, so you don't get overwhelmed.

- Calin

What this app does

Neuro-Budget is a paycheck and bill list. You save your paychecks and bills once, add them as they come up, and attach each bill to the paycheck that covers it. The app then shows how much of each paycheck is already spoken for and how much is safe to spend.

That is the whole idea. Every bill gets a paycheck to live on, so you can see your whole month before the money lands.

It is made for AuDHD, ADHD, and neurodivergent households who get paid by paycheck and want to see which check pays which bill, and how much is safe to spend after those bills.

- **Paychecks and bills, side by side.** Each paycheck shows what is committed, what is left, and how full it is.
- **Safe to spend.** One number per paycheck, plus one overall, so you know what you can use without guessing.
- **A Month list.** Save the things you have every month once, then reuse them.
- **Ask Grok.** Type or say a change, like "add water bill 35 due the 20th", instead of filling in a form.
- **Savings and reserves.** Mark money you are setting aside so it is counted separately.
- **Share one budget between two phones.** Great for two people running one household.
- **Bill reminders.** A morning phone notification for bills that are coming up.
- **Colors and light or dark.** Make it easy on your eyes.

What it is, and what it isn't

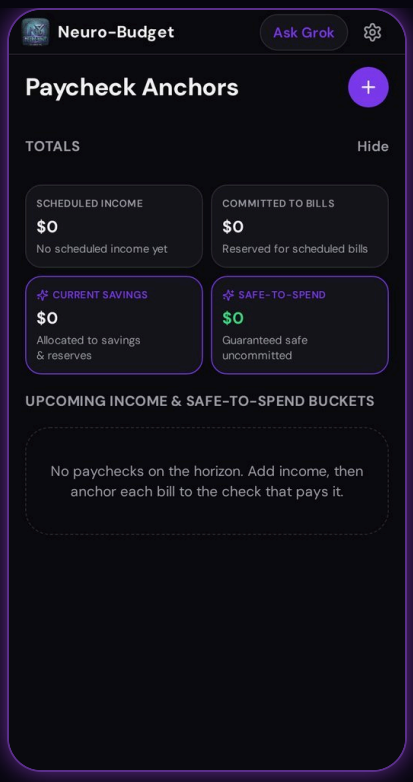

- It is a budget you fill in yourself. It does not connect to a bank, a card, or your employer.
- It does not move money or pay a bill for you. Marking a bill paid only changes the list.
- It runs on your phone. Add it to your Home Screen and open it like any other app.

Finding your way around

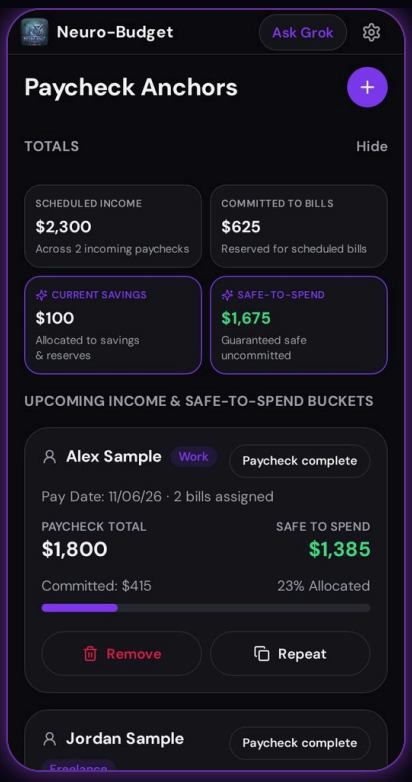

Three tabs sit at the bottom of the screen: **Bills**, **Paychecks**, and **Month**. At the top are the app name, the **Ask Grok** button, and the **settings gear**.

- **Paychecks** (Paycheck Anchors): your incoming paychecks and your totals. This is the tab I live in.
- **Bills**: every bill, grouped by month, with the next one coming up at the top.
- **Month** (Projected Pay and Bills): the paychecks and bills you have every month, saved once so you never type them twice.
- **Ask Grok**: type or say what you want to change.
- **Gear:** opens your Budget profile, where the settings live.

Most screens use the same pattern. A round **+** button at the top right adds something. Forms slide up from the bottom. Tap the **X** to close one, or **Cancel** to back out.

A brand new budget. Nothing in it yet.

The Paychecks tab with a few paychecks added.

Getting started

This is the order I recommend. Set things up once, and the rest is a few taps.

1 Put it on your Home Screen

- **iPhone:** open Neuro-Budget in Safari. Tap **Share**, then **Add to Home Screen**.
- **Android:** open it in Chrome. Open the browser menu and tap **Install app** or **Add to Home screen**.
- In Settings there is also an **Install** button. If your phone does not pop up an install box, it tells you to use the browser menu instead.
- Open the app from that icon from now on. Bill reminders need it.

2 Make it yours in Settings

- Tap the **gear** to open **Budget profile**.
- Type a **Display name** and tap **Save name**. It shows at the top of the app.
- Pick **Use light** or **Use dark**, then pick a color.

3 Save what you have every month

- Open the **Month** tab. Tap the round **+**, then **Paycheck**. Add the earner name, where the money comes from, how often you get paid, and the amount. Tap **Save paycheck**.
- Tap **+** again, then **Bill**. Add the name, the due day, and the amount. Tap **Save bill**.
- For something you pay every time you get paid, like groceries, switch to **Every paycheck** first.

4 Add your paychecks

- Open **Paychecks**. Tap **+**. Under **Monthly paycheck**, tap **Choose a saved paycheck** and it fills itself in.
- Tap **Insert pay date**, pick the day, and tap the check mark. Then tap **Save Income**.
- Tap **Repeat** on a paycheck any time to add the next one on its schedule. The prompt shows you the date first.

5 Add your bills

- Open **Bills**. Tap **+**. Under **Monthly bill**, tap **Choose a saved bill**, then pick the due date.
- Under **Assign to Paycheck (Who Pays)**, pick the paycheck that covers it. You can leave it as **Unassigned** and do it later.
- Turn on **Label as Savings / Reserve** for money you are setting aside. Tap **Save Bill**.

6 Read your Safe to spend

- Open **Paychecks**. Each card shows the paycheck total, what is committed, and how much is **Safe to spend**.
- Tap a card to open that paycheck and see exactly what comes out of it.

7 Optional extras

- Turn on **bill reminders** for a morning notice.
- Share the budget with a second phone.
- Use **Ask Grok** when saying a change is faster than tapping through a form.

The Paychecks tab

The Paychecks tab is called **Paycheck Anchors**, because every bill gets anchored to the paycheck that pays it. It opens with your **Totals**. Tap **Hide** to fold them away and **Show** to bring them back.

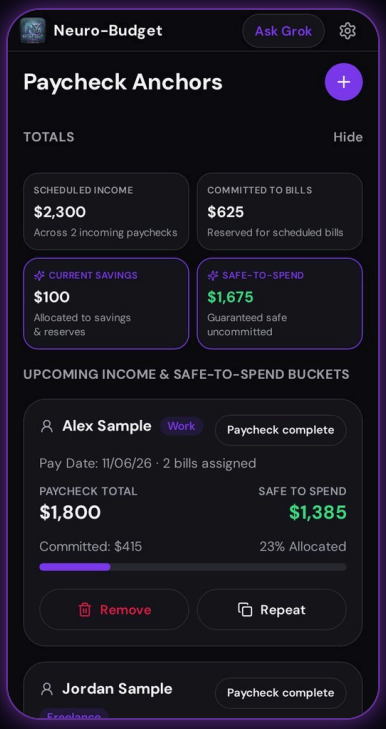

- **Scheduled Income:** the total of your upcoming paychecks, and how many there are.
- **Committed to Bills:** the money already spoken for.
- **Current Savings:** money you labeled as savings or reserves.
- **Safe-to-Spend:** what is left that is not committed to anything. It turns red if you have committed more than you have.

Under the totals is **Upcoming income and safe-to-spend buckets**. Each paycheck is its own card.

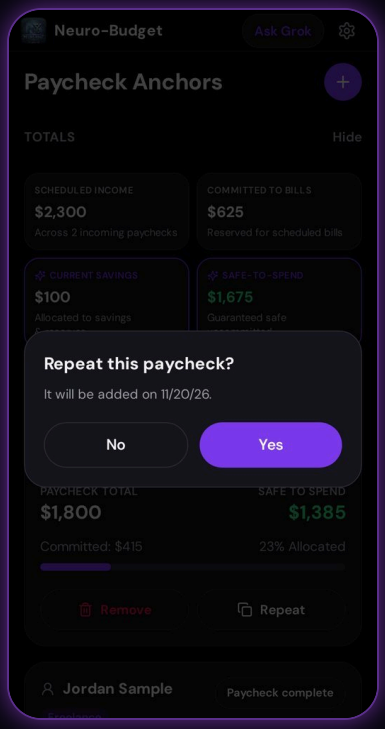

Reading a paycheck card

- The earner's name, with the income source as a small tag, like Work.
- **Pay Date** and how many bills are assigned to it.

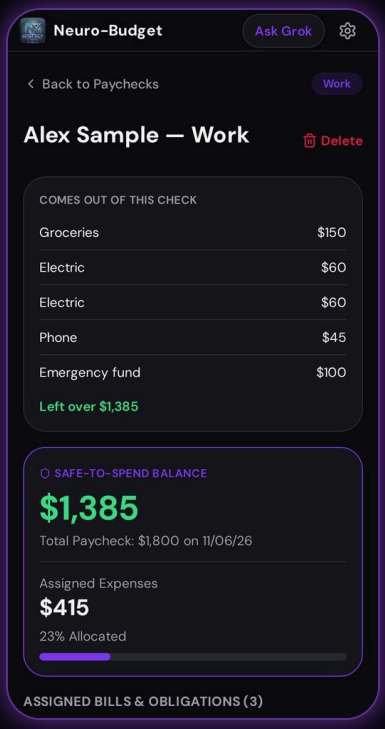

- **Paycheck Total** and **Safe to spend**.
- **Committed** and a bar that shows the **percent allocated**.
- **Paycheck complete** marks every bill on that paycheck paid. The app asks you to confirm first, then takes the paycheck off the list.
- **Repeat** adds the next paycheck on this one's schedule. It does not copy the bills onto the new paycheck.
- **Remove** asks you to confirm. Bills that were on it become Unanchored. They are not deleted.

Totals on top, then one card per paycheck.

Repeat shows you the new date before it adds anything.

Tap a card to open the paycheck.

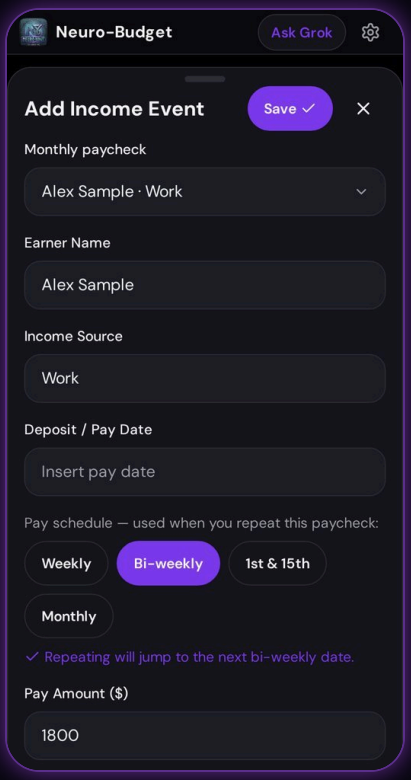

Add a paycheck

Tap the round **+** on the Paychecks tab. The form is called **Add Income Event**.

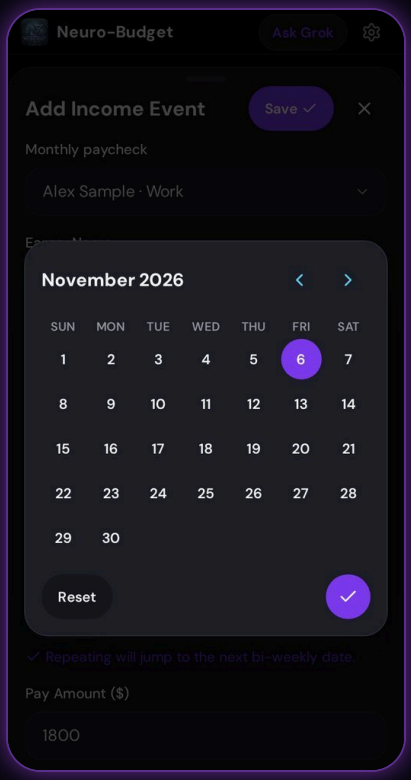

- **Monthly paycheck:** if you saved paychecks on the Month tab, pick one here to fill in the name, source, schedule, and amount.
- **Earner Name:** who gets this paycheck.
- **Income Source:** where it comes from, like Work, VA Benefits, or Freelance.
- **Deposit / Pay Date:** tap it and a small calendar opens. Tap a day, then tap the check mark to use it. **Reset** clears it.

- **Pay schedule:** Weekly, Bi-weekly, 1st & 15th, or Monthly. This is only used when you tap Repeat. The app tells you what Repeat will do, like "Repeating will jump to the next bi-weekly date."
- **Pay Amount ($):** what the paycheck is for.
- **Extra Income:** turn this on for a bonus or a one-time payment. It keeps extra money from inflating your normal budget.
- **Notes:** anything you want to remember, like which bills this one is for.

Tap **Save Income** (or **Save** at the top) when you are done.

Choosing a saved paycheck fills in the form.

Tap the pay date to open the calendar.

Inside a paycheck

Tap any paycheck card to open it. This is where you see exactly where the money goes.

- **Comes out of this check:** a plain list of everything taking money from this paycheck, with **Left over** at the bottom.
- **Safe-to-spend balance:** the big number. Under it you see the total paycheck and its date, **Assigned Expenses**, and the **percent allocated** bar.
- **Assigned bills and obligations:** every bill on this paycheck, with how many there are.

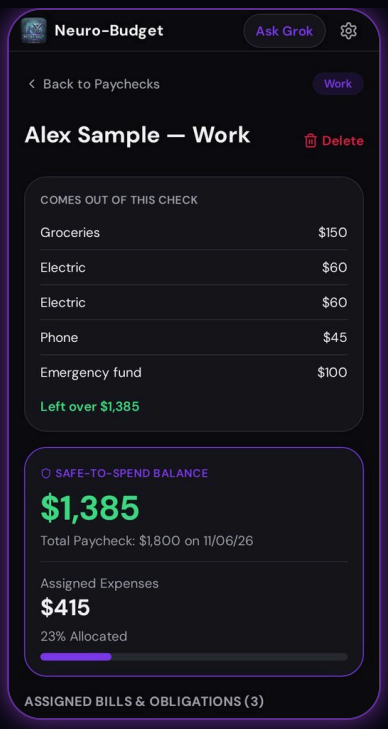

Working with assigned bills

- **Add Bills** opens the Add Recurring Bill form with this paycheck in mind, so you can make a new bill right here.
- **Assign Bill** lists bills that are **Not assigned**. Tap one and it moves onto this paycheck. Bills already on another paycheck show under **Already assigned** with the name of the paycheck holding them.
- **Mark paid** next to a bill marks it paid. If you slip, tap **Undo**.
- **Remove** takes a bill off this paycheck. It goes back to Unanchored and is not deleted.
- Tap a bill's name to see its details.
- Money you set aside, like an emergency fund, shows a **Savings** tag.

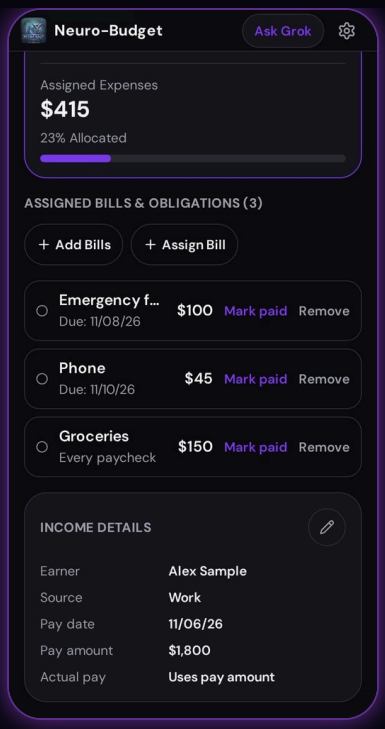

Income details

At the bottom you see the earner, source, pay date, pay amount, and **Actual pay**. Tap the pencil to edit any of it.

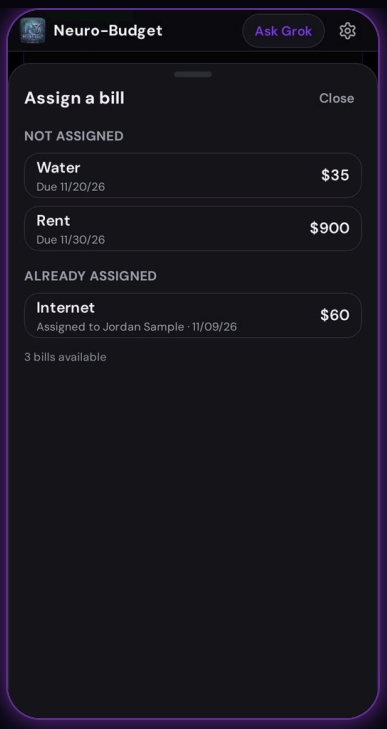

- **Actual pay amount:** if the check came in different from what you expected, type the real amount here. The app uses it in your totals. Leave it blank and the app uses the pay amount. Tap **Save actual amount**.
- You can also change the schedule, the Extra Income switch, and the notes. Tap **Save changes**.
- **Delete** at the top removes the whole paycheck.

What comes out of the check, and what is left.

Assigned bills and income details.

Assign Bill shows what is still free.

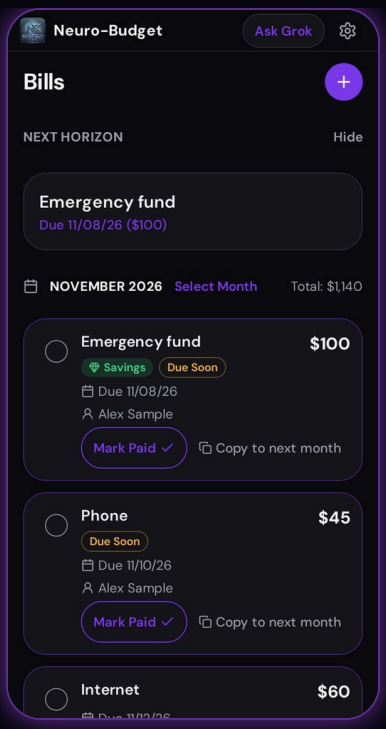

The Bills tab

Every bill lives here, grouped by month. A round **+** at the top right adds a bill.

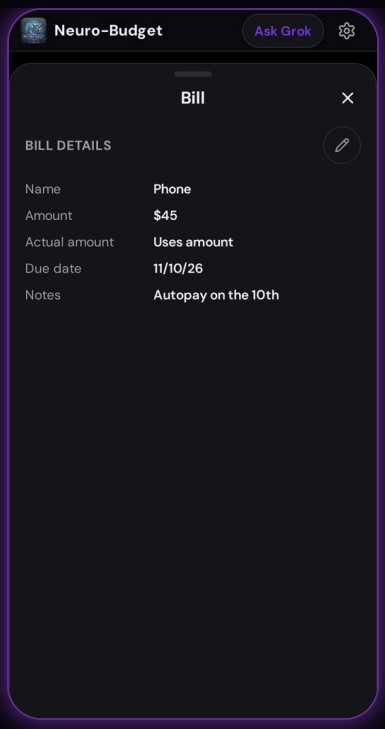

- **Next Horizon:** the unpaid bill that is due first, with its date and amount. Tap **Hide** or **Show** to fold it away.
- **Month groups:** bills sit under their month, like November 2026, with a total for that month.

Reading a bill card

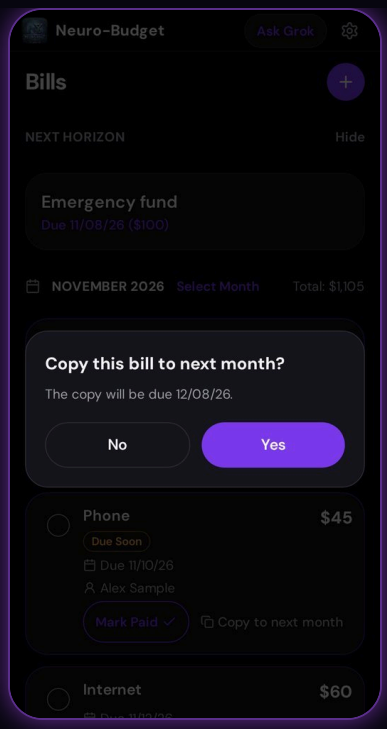

- The bill name and the amount.
- Tags: a green **Savings** tag for money you set aside, and an orange **Due Soon** tag when it is coming up within about a week.
- The due date, and who pays it. If no paycheck has it yet, it says **Unanchored**.
- **Mark Paid:** marks that one bill paid.
- **Copy to next month:** asks "Copy this bill to next month?" and shows the new due date. Tap **Yes** and a copy is added. The copy is not assigned to a paycheck, so assign it yourself.
- Tap the bill name to open its details.

Bills grouped by month, with tags.

Tap a bill to see its details.

Copy to next month asks first.

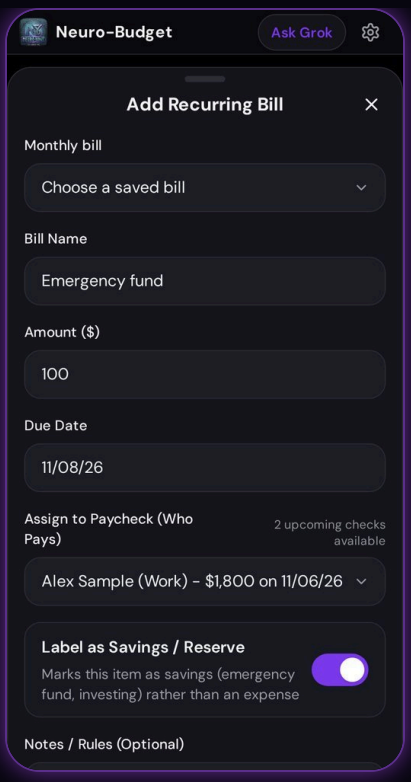

Add or edit a bill

Tap **+** on the Bills tab. The form is called **Add Recurring Bill**.

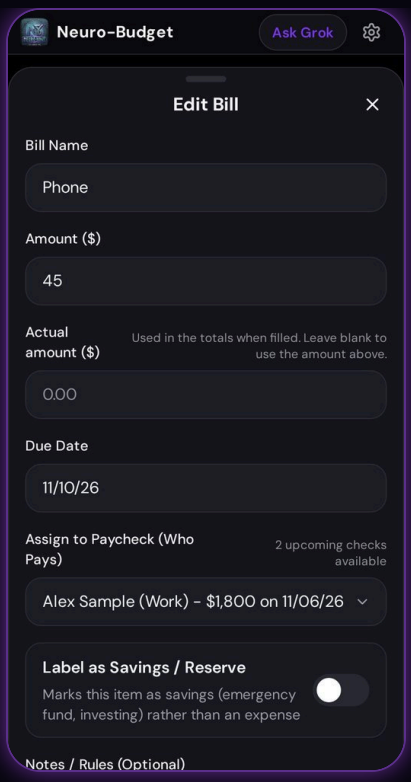

- **Monthly bill:** pick a saved bill from your Month list to fill in the name and amount.
- **Bill Name** and **Amount ($)**.
- **Due Date:** tap it to open the calendar and pick a day.
- **Assign to Paycheck (Who Pays):** choose from your upcoming paychecks, or leave it as **Unassigned (No paycheck)**. The form tells you how many upcoming checks are available.
- **Label as Savings / Reserve:** for money you are setting aside, like an emergency fund or investing. It gets the green tag and counts toward Current Savings.
- **Notes / Rules:** a reminder or auto-pay instructions.

Tap **Save Bill**. To change one later, tap the bill, tap the pencil, change what you need, and tap **Save Changes**.

Actual amount: bills have this too. If the real bill came in different, type it here. The app uses it in your totals. Leave it blank to use the amount above.

Adding a savings bill and picking who pays.

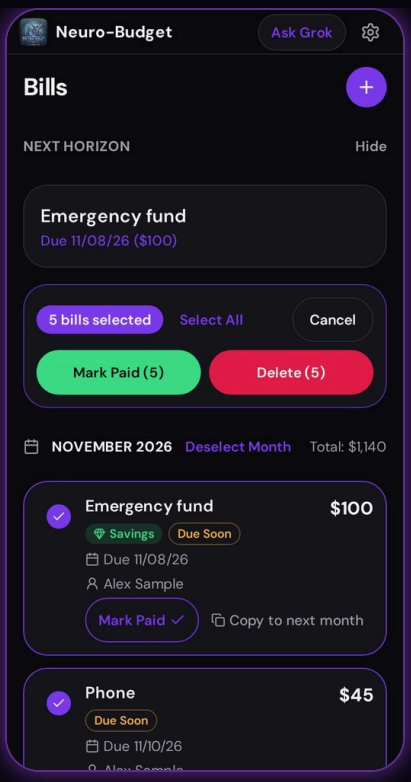

Editing a bill, including Actual amount.

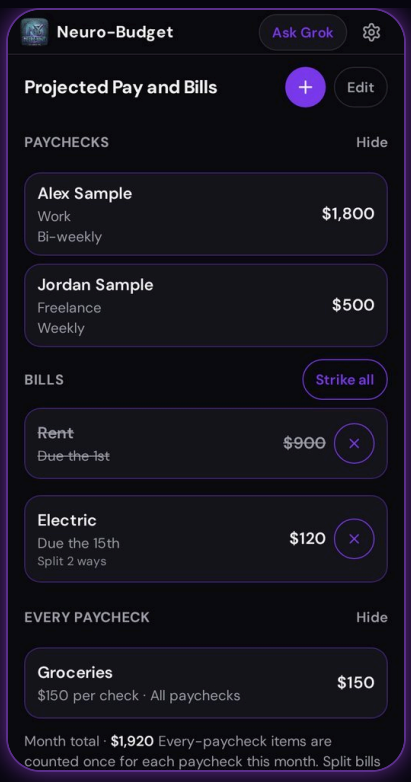

Paying and cleaning up bills

- **Select one or many.** Tap the circle on a bill to select it. Tap **Select Month** to pick every bill in that month, or **Select All** to grab them all.
- A bar appears with the count, like "4 bills selected." Tap **Mark Paid** to mark them all, **Delete** to remove them, or **Cancel** to clear your picks.
- **Paid bills hide at the bottom.** Tap **Show paid bills** to see them by month. Tap **Undo** on one to put it back as unpaid. Tap **Hide** to close the list.
- **Clear** removes every paid bill after asking "Are you sure?" Unpaid bills stay.

One thing to know: a bill that is paid still counts against its paycheck. To stop it counting, remove it from the paycheck.

Select a month, then mark paid or delete in one tap.

The Month tab keeps what repeats every month.

The Month tab

Month is called **Projected Pay and Bills**. It is where you save the paychecks and bills you have every month, so you never type them twice. It is also what fills the "Choose a saved paycheck" and "Choose a saved bill" lists.

The screen has three parts: **Paychecks**, **Bills**, and **Every paycheck**. A line at the bottom shows the **Month total**. Every-paycheck items are counted once for each paycheck this month. Split bills are counted once.

Items you save here also show up in each paycheck's **Comes out of this check** list, so your plan shows up before you add a single bill.

Save a paycheck

- Tap **+**, then **Paycheck**.
- Fill in **Earner Name**, **Income Source**, **Pay schedule** (Weekly, Bi-weekly, 1st & 15th, or Monthly), and **Pay Amount ($)**.
- Tap **Save paycheck**.

Save a bill

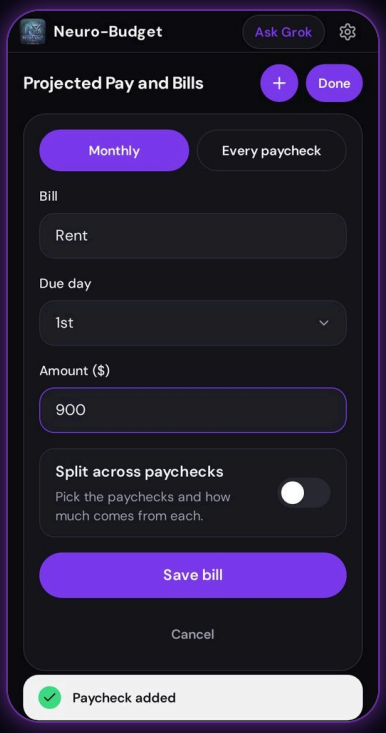

Tap **+**, then **Bill**. At the top, choose how it repeats.

- **Monthly:** for a bill due once a month. Add the **Bill** name, pick the **Due day** (1st to 31st), and type the **Amount ($)**.
- **Every paycheck:** for something you pay each time you get paid, like groceries. Add the name, pick **From which paycheck** (All paychecks, or one in particular), and type the **Amount per check ($)**.
- **Split across paychecks:** turn this on for a monthly bill you pay in pieces. Tap **Add part**, pick a paycheck, and type how much comes from it. Each part says things like "Part 1 of 2 set aside," and the form shows what is **Remaining** so the pieces add up.

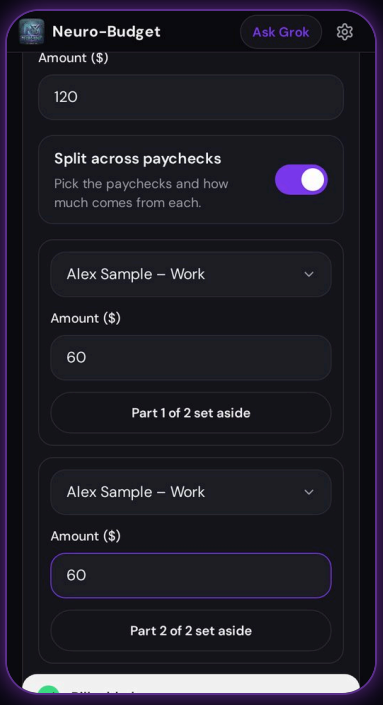

Tap **Save bill**.

Change, delete, or check things off

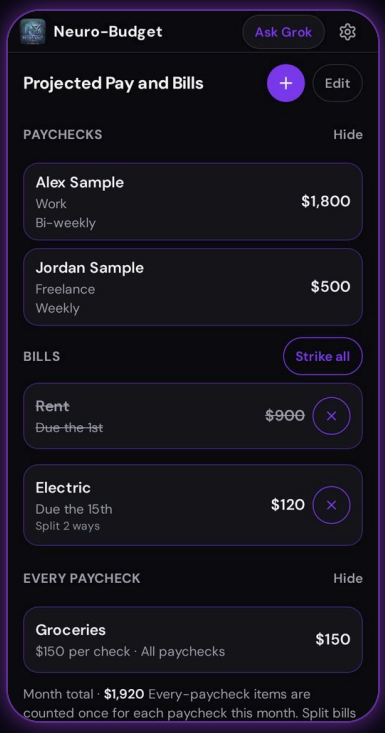

- Tap **Edit** at the top to show a pencil and a trash can on every item. Tap **Done** when you finish.
- Tap the **x** on a bill to strike a line through it, like a checklist. **Strike all** does every bill at once. This is a handy way to track what you have already handled this month.
- **Hide** folds the Paychecks and Every paycheck sections away.

Saving a monthly bill.

Splitting a bill across paychecks.

Rent is struck off like a checklist.

How the numbers work

This is the part that does the math so you do not have to.

- **On one paycheck:** Safe to spend is the paycheck amount minus everything committed to it. A savings bill on that paycheck also reduces safe to spend. If it drops below zero, it turns red.
- **Committed** includes bills already marked paid. To stop a paid bill from counting, remove it from the paycheck.
- **Scheduled Income** is your regular paychecks. **Extra Income** is kept separate so a bonus does not make your normal budget look bigger than it is.
- **Current Savings** adds up everything you labeled Savings / Reserve.
- **Safe-to-Spend** on the Paychecks tab is the overall number: your income, minus what is committed.
- **Next Horizon** on the Bills tab is the unpaid bill due soonest.
- **Actual pay** and **Actual amount**, when you fill them in, are used in the totals instead of the planned amounts.

Ask Grok

Ask Grok is the button at the top of the screen. It opens a small panel at the bottom with a text box that says **Type or speak**.

- Type what you want, then tap **Ask Grok**. Or tap the **mic** and say it. Your phone may ask to use the microphone first.
- A line under the box tells you what it did, like "Added Water for $35." The app jumps to the matching tab so you can see it.
- Tap **Hide** to close the panel.

Short commands that run on your phone

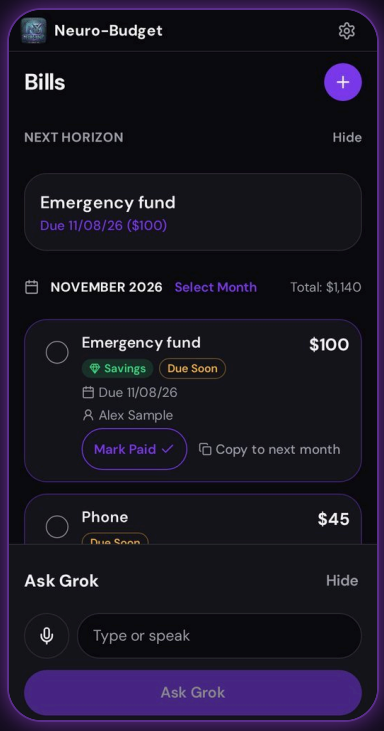

These are quick and simple, and they run right on your phone.

- *add electric bill 80 due the 15th*
- *delete the water bill*
- *change rent to 1200*
- *mark the phone bill paid* (or "unpaid" to undo it)
- *add paycheck from Hospital 2400 on the 15th* (say "extra" for extra income)

If two things share a name, it asks which one instead of guessing.

Bigger requests, and your own key

- Looser sentences, like moving a bill onto a paycheck or changing a due date, are handed to Grok to work out.
- **Optional xAI API key:** in Settings, paste a key that starts with **xai-** and tap **Save key** to have smarter requests use your own xAI account and credits. The key stays on that phone. **Remove key** clears it. You can make a key at console.x.ai.

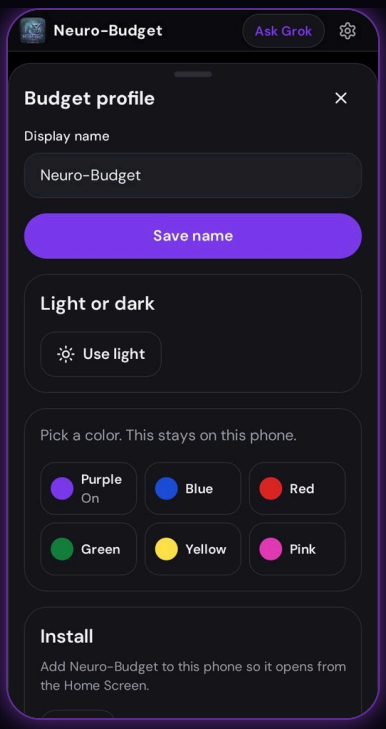

Typed a short command. The app added the bill.

Settings

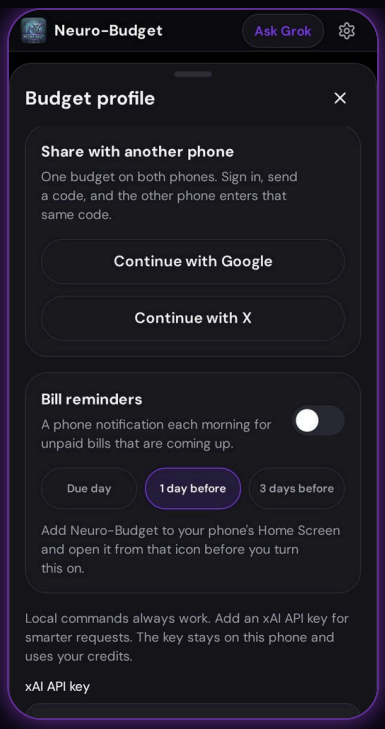

Tap the gear to open **Budget profile**. Scroll down to see everything.

Make it look right

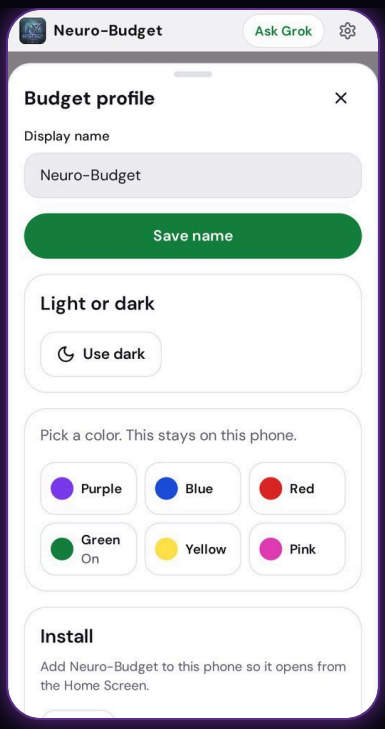

- **Display name:** type a name and tap **Save name**. It replaces the app name at the top. You can call your budget anything you like.
- **Light or dark:** tap **Use light** or **Use dark**. Pick whichever is easier on your eyes.
- **Color:** Purple, Blue, Red, Green, Yellow, or Pink. The one you pick says **On**, and it stays on that phone.
- **Install:** adds Neuro-Budget to your Home Screen.

Name, light or dark, and colors.

Sharing and bill reminders.

Light mode in green.

Share one budget with a second phone

Two people can run one budget on two phones. Changes on one phone show up on the other within a few seconds.

1. Open Settings. Under **Share with another phone**, tap **Continue with Google** or **Continue with X** to sign in.
2. Tap **Share this budget**. A code appears. Tap **Copy code** and send it to the other person.
3. On the other phone, open Settings, sign in, type the code under **Enter code**, and tap **Join with code**.

- **Joining replaces** the bills and paychecks on the phone that joins with the shared budget. If that phone already has numbers you need, tap **Export backup** first. The app warns you and asks you to confirm.
- The screen says "Saving to the shared budget" while a change is on its way. If the shared budget cannot be reached, your change stays on that phone until it connects again.
- **Stop sharing on this phone** disconnects only that phone. There is also a **Sign out** link.

Honest note on data: your paychecks and bills are saved on your phone. When you share a budget, it is also saved online so the other phone can load it. If you never share, it stays on your phone.

Summary for another app

Once you are sharing a budget, Settings shows **Summary for another app**. Tap **Allow a summary** to get a code. Another app can use that code to read the unpaid bills due in the next 7 days. It can only read. It cannot change your budget. The code is shown once, so copy it right away.

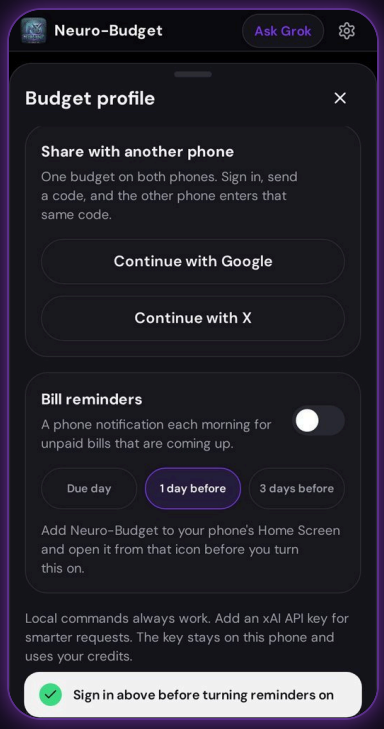

- **Make a new code** stops the old one from working.
- **Turn off summary** stops the other app from getting bills.
- Neuro-Vault is one of my other Apps that can use this, to show your bills on its Home screen.

Bill reminders

Bill reminders send a phone notification each morning for unpaid bills that are coming up. It is a notification on your phone. It is not an email or a text.

1. Sign in first, using the sharing section above. If you are not signed in, the app tells you "Sign in above before turning reminders on."
2. Add Neuro-Budget to your Home Screen and open it from that icon.
3. Turn on the **Bill reminders** switch and allow notifications when your phone asks.
4. Pick **Due day**, **1 day before**, or **3 days before**. You can change this any time.

Turn the switch off to stop them.

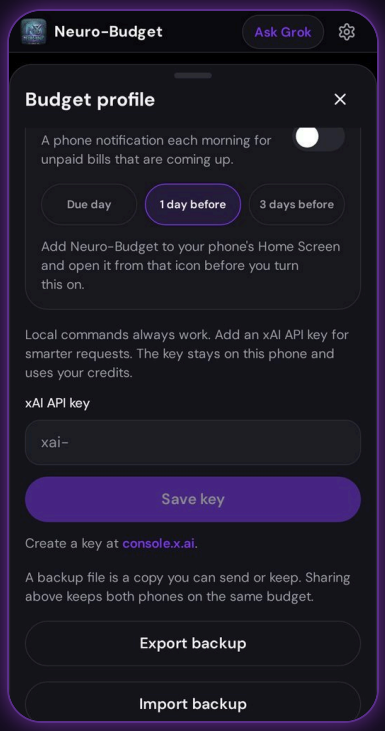

Reminders need you signed in first.

Backup, import, and reset

- **Export backup:** asks "Export a backup file?" and, when you tap **Yes**, downloads a file called **neuro-budget-backup.json**. It holds your paychecks, bills, and Month list. Keep it or send it to yourself.

- **Import backup:** asks you to confirm, then you pick a backup file. It replaces the paychecks, bills, and Month list on this phone. If you are sharing, it replaces them on both phones. A file that is not a Neuro-Budget backup is turned away, and nothing changes.
- **Reset budget:** asks "Reset this budget?" and, if you confirm, deletes the paychecks, bills, and Month list on that phone. Your display name stays. If you are sharing, it affects the shared budget.

Tip: export a backup before you import, join a shared budget, or reset.

Key, backup, import, and reset live at the bottom of Settings.

Tips from me

- Use the Month tab first. Saving your paychecks and bills once makes everything else a couple of taps.
- Leave **Extra Income** off for regular pay. Turn it on for bonuses.
- Use bill **Notes** for auto-pay details or a rule you want to remember.
- Use **Copy to next month** and **Repeat** instead of retyping, then assign the copied bills.
- Check your paychecks, then your bills, then breathe. The point is no surprises.

Questions people ask

Do I need to sign in? Only to share a budget with a second phone and to turn on bill reminders. Adding paychecks and bills, and short Ask Grok commands, work without signing in.

Does it connect to my bank? No. You type in what you want to track.

Safe to spend is red. The bills on that paycheck add up to more than the paycheck.

A paid bill still counts against a paycheck. Committed includes paid bills. Remove it from the paycheck to stop it counting.

Reminders do not arrive. Make sure you are signed in, the app is on your Home Screen, and you opened it from that icon before turning reminders on. If notifications are blocked, allow them for Neuro-Budget in your phone settings.

Talk does not work. Allow the microphone if your phone asks, then try again. You can also use your keyboard's mic.

Where is my data? On your phone. A budget you share is also saved online so the other phone can load it. Your xAI key, if you add one, stays on the phone you typed it into.

Notes / Important

- This preview shows the app with made up sample numbers. Your budget starts empty.
- The app does not connect to a bank and does not pay bills for you.
- The full app is a one-time purchase. There is no monthly fee.
- If anything isn't working, email help@neuroglitchprojects.com and I'll fix it. You can also find me at neuroglitchprojects.com.
